Subject:
Nuclear Energy - an Intelligent Choice

Comment:

I would like to encourage serious consideration for adoption of nuclear energy in the state of Montana as a reliable and green energy solution. We need a balanced solution for a sustainable future and we should consider nuclear energy a backbone of our plan. The grid failure in Texas during extreme weather conditions should be an example of an over reliance on unreliable energy sources. An investment in nuclear now can secure a reliable energy future for ever-expanding needs in our great state - please consider installation of small reactors in numbers and locations to support our expanding population. This will be critical as more people move to a reliance on electric while targeting fossil fuels which is not a workable strategy.
